

How to Run the AI Product-Search Study

Quick guide for the oTree app (ai_search_otree)

1. One-time setup

Do this on the laptop that will run the study.

- 1 Install **Python** (3.10 or newer) from python.org.
- 2 Unzip **ai_search_otree.zip**.
- 3 Open Terminal (Mac) or Command Prompt (Windows) and run:

```
cd path/to/ai_search_otree
pip install otree
```

2. Try it yourself first

- 1 Run:

```
otree devserver
```
- 2 Open **http://localhost:8000** in your browser.
- 3 Click **ai_search** under Demo, click a participant link, and go through the study as a student.
- 4 To stop, press **Ctrl + C** in the terminal.

3. On class day

- 1 Connect the laptop to the **same Wi-Fi** as the students.
- 2 Start the study server:

Mac:

```
export OTREE_ADMIN_PASSWORD=pick_a_password
export OTREE_PRODUCTION=1
otree prodserver 8000
```

Windows:

```
set OTREE_ADMIN_PASSWORD=pick_a_password
set OTREE_PRODUCTION=1
otree prodserver 8000
```

- 3 Find the laptop's IP address. Mac: System Settings > Wi-Fi > Details. Windows: type ipconfig and look for IPv4 Address. It looks like **192.168.1.25**.
- 4 On the laptop, open **http://localhost:8000**, log in as **admin** with your password, then go to **Rooms > classroom > Create session**. Enter the number of students and click Create.
- 5 Write this link on the board (use your laptop's IP):
http://192.168.1.25:8000/room/classroom
- 6 Students open the link and follow the screens. Keep the laptop on and awake until everyone finishes.

4. Get the data

- 1 On the laptop, open **http://localhost:8000 > Data**.
- 2 Download both files: **ai_search** (answers, times, surveys) and **ai_search custom** (search and ChatGPT activity log).
- 3 Only after the files are saved, stop the server with **Ctrl + C**.

If something goes wrong

- **Students can't open the link:** check they are on the same Wi-Fi; allow Python through the laptop's firewall.
- **Google or ChatGPT won't open:** allow pop-ups for the study site in the browser.
- **A student refreshes the page:** that's fine. Their timer and typed answers stay.
